

Renaissance User Interface

We Advance Your Interventional Lab

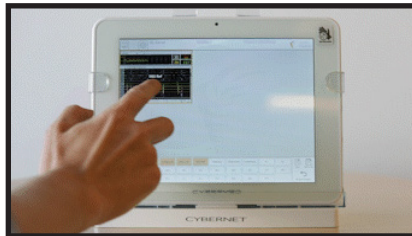

The Problem

Most large displays deployed in Interventional Labs today are not easily configurable and give the user limited control of the video inputs. These clunky interfaces are restrictive, and often require an expensive service visit to change.

The Solution

Carrot Medical's proprietary Renaissance User Interface is the easiest way to adjust the layout on your C-View® large display. Renaissance allows you to make unlimited changes to your layouts "on the fly" -- and **doesn't require a service visit.**

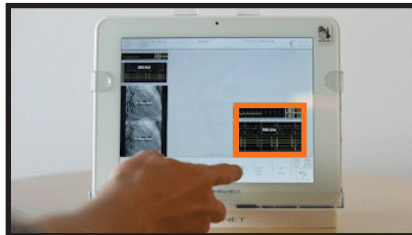

Drag-and-Drop allows for quick and easy adjustments to the layout

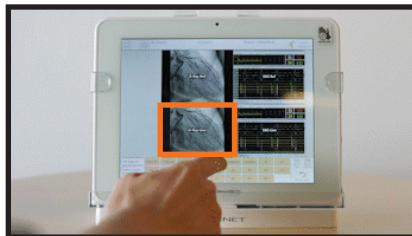

Pinch-to-Zoom allows for infinite arrangements of input windows

Autoscaling Tool allows for rapid building of customized presets

Quick-Swap Tool allows for instant transitions to a different input

Additional Features

- No limit to the number of inputs to display other than what is practical for the large screen
- No limit to the number of saved presets
- User/Case Type Folders allow for organization of unlimited presets
