

C-Com[®] Intercom System

The Problem:

Barriers between the procedure room and the control room do more than block unwanted x-ray exposure - they block communication. Standard intercom systems often have poor sound quality which can lead to miscommunication between staff during cases.

Our Solution:

Our Pro Audio solution is custom built around the needs of your lab - ensuring clear communication no matter the configuration of your room. With the ability to selectively locate our directional microphones and discreet, in-ceiling equipment, the Carrot Pro Audio solution will bring clarity between the procedure room and control room - helping make your cases run smoothly.
