

C-Suite® Live-Streaming and Recording

The Problem:

Traditionally during interventional cases, the imaging data from various modalities (x-ray, ultrasound, hemodynamics, etc.) are viewed on the large display for the physician to analyze in real-time. After the case is completed, these images may or may not be stored as separate files on the hospital's network. The imaging data is by definition not synchronized, difficult to retrieve, and nearly impossible to analyze further for educational and training purposes.

The Solution: C-Suite

C-Suite captures data directly from the C-View® Large Display, creating a time-synced recording of all the images, making it easy to review cases. C-Suite's dedicated Server makes the data retrieval very simple. C-Suite can even be paired with the C-Com® Wireless Headset System, allowing a physician to make verbal dictations during the case that are then saved in the actual video file. Additionally, C-Suite allows educational facilities to simultaneously live stream cases at a separate location, making it an excellent distance training tool.

Features:

- Record live cases
- Real-time streaming
- Searchable video archive
- Review from any device
- Encrypted 1080p video
- Works on existing IT infrastructure
- Unlimited end-user licenses
- Designed for HIPAA compliance
- Direct compatibility with C-View
- Physician dictation with C-Com

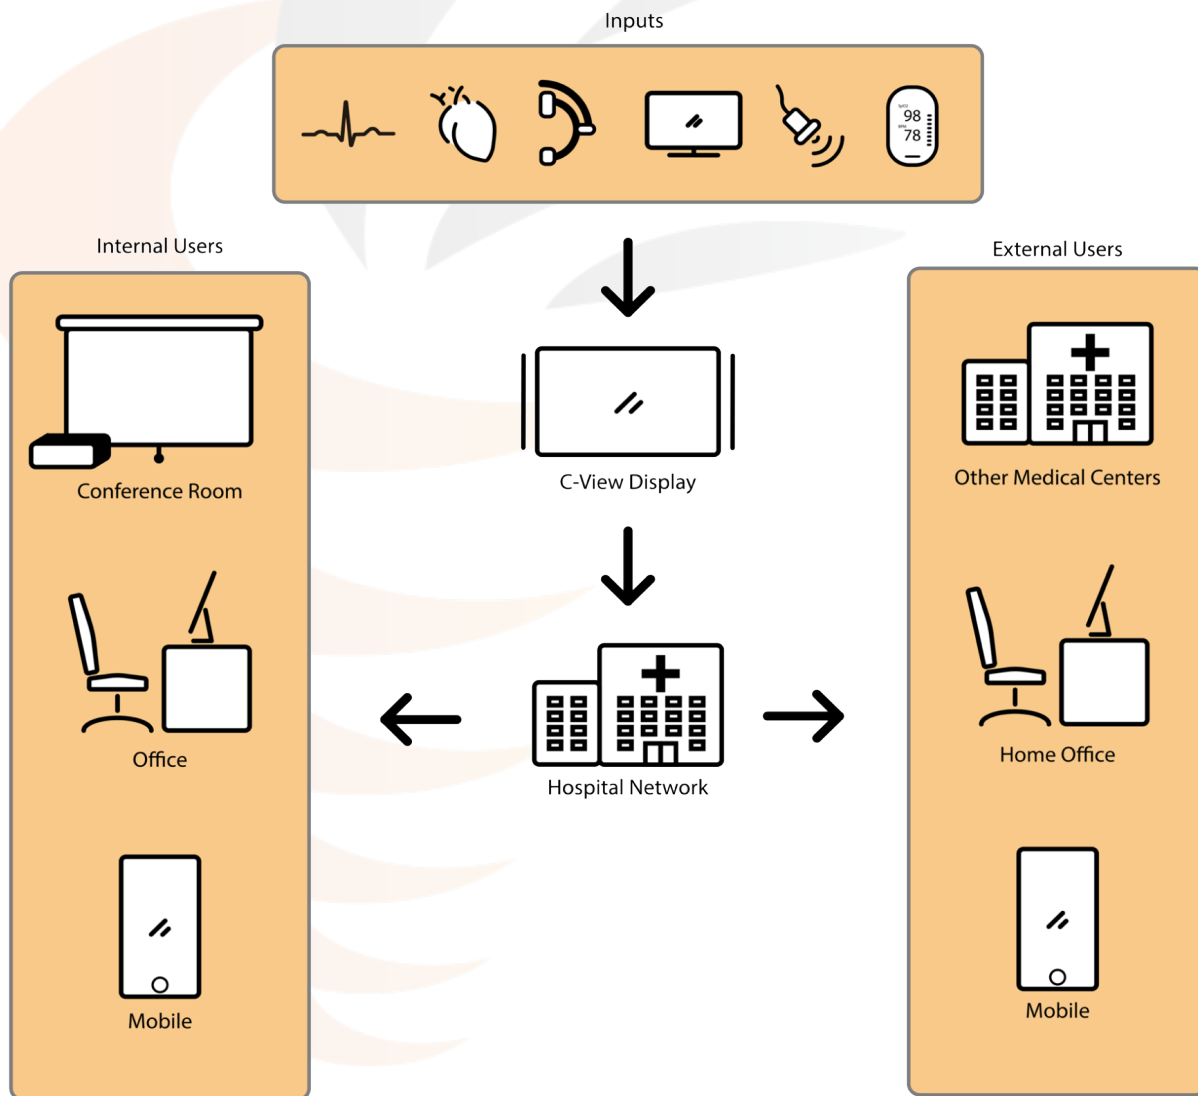

C-Suite allows you to live-stream the modalities from the large display to any device with access — be it a lecture hall across campus or an office down the hall

We Advance Your Interventional Lab

C-Suite[®] Live-Streaming and Recording

Your Clinical Data Anywhere You Need It

C-Suite is the premier video distribution solution for hospitals. The C-Suite Virtual Machine Server integrates seamlessly into existing IT infrastructure, resulting in a secure solution to help assure HIPAA compliance. Simply attach C-Suite video encoders to the video source(s) you wish to capture, then connect it to the C-Suite server and press record— that's it! Anyone granted access will be able to view the footage from any location in the hospital, or externally by utilizing a VPN solution setup by the hospital IT department.
